

Jay Grant and Associates adds NuvoSonic as a Homeland Security Client

Jay Grant & Associates, P.S. (JG&A), a Seattle, Washington and Washington, D.C. government relations and public affairs firm, announced today that NuvoSonic, a company located in Bedford, New Hampshire, has retained JG&A to represent the company before the Department of Homeland Security.

With over 20 years experience in the field of sonar, NuvoSonic works to protect American ports and harbors through strategic asset protection and intervention. With an understanding of the very real threat posed to the United States through an underwater source, NuvoSonic is an innovative leader in the use of sonar to detect and assess sub-surface threats. In addition, the cutting edge technology of the Parametric Array Sonic Echo Ranging (PASER) system provides a greater underwater detection range when compared to a range created by conventional sonar.

Jay Grant, Managing Partner for JG&A, stated “I am pleased that our firm will represent some of the most far reaching and amazing underwater threat assessment technology available today. Through the development of the PASER technology, NuvoSonic can protect and secure American borders in the wake of nine-eleven. Their technology will allow for more extensive range to effectively detect underwater threats, a major concern for protecting ports and harbors throughout the world.”
