

Twisted Pair Solutions Expands Jay Grant and Associates Homeland Security Clientele

Jay Grant & Associates, P.S. (JG&A), a Seattle, Washington and Washington, D.C. government relations and public affairs firm, announced today that Twisted Pair Solutions, a telecommunications company based in Seattle, has retained JG&A to represent the company before the Department of Homeland Security.

Twisted Pair is a leader in developing solutions for converged networks. Their innovative Wide Area Voice Environment (WAVE) software allows businesses and agencies to use existing IP networks to create massively scalable group communications channels, bringing together previously disparate communications in a low cost, secure way. This approach addresses the interoperability problems first responders faced on Sept. 11 and has received high acclaim by industry peers. Twisted Pair Solutions' WAVE earned the Most Innovative Idea award at the Cisco Innovation Through Convergence Expo last September. The software is currently used by a number of governmental and private organizations including the US Coast Guard, Army, Air Force, Cisco Systems, Boeing, Northrop Grumman, and Lockheed Martin.

Jay Grant, Managing Partner for JG&A, stated "I'm excited that our firm will represent Twisted Pair Solutions and their efforts to develop some of the most forward looking and cost effective technology. Having seen it effectively used in field for both the private and government sector, has convinced me as well as many Members of Congress, that Twisted Pair Solutions understands and can meet the critical need of providing interagency communication in the wake of nine-eleven."
